# Game Time

## A Day at the Beach

**You will need:**

20 note cards

On each note card, write a name, the number of shells collected, and the amount of time (5, 10, 15, 20, or 30 minutes) in which the shells were collected. For example: *Justin collected 10 shells every 15 minutes.* (From this card, students could conclude that Justin collected 40 shells in an hour.)

- 1**  Mrs. Peabody's class went to the beach. Each student collected shells for an hour. Choose a note card and read it.
- 2**  Figure out how many shells that student collected in an hour.
- 3**  If you are correct, select another card. If you are not correct, your turn is over. The first student to get 5 correct in a row wins!
